

Memo to: Stephen Kowalchuk, Jr.
Chief Design Engineer
From: David C. Clark
Project Engineer
Reference: Tybouts Corner Landfill
Monitoring Program
Copy to: A. W. Madora
W. S. O'Sullivan
A. M. Parisi
Date: February 27, 1976

On February 25, 1976 I accompanied Glenn Elliott on a site inspection of Tybouts Corner Landfill. Glenn showed me the leachate seeps described in his December, 1975 report and explained his reasons for wanting to take three (3) surface-water samples between Route 71 and U. S. #13. One of Glenn's reasons was to reaffirm the earlier statement that water quality improves during its trip through Woodlawn Sand & Gravel and to defend New Castle County against any claims that Tybouts Corner Landfill is contaminating Red Lion Creek.

I recommend we authorize sampling and testing at three (3) points between Rt. 71 and U. S. Rt. 13. The upset limit for this should be \$140.00.

I have checked with Parisi, we have the money.
